MULTIFUNCTIONAL GATE BOX MGB-AP

- Auxiliary release
- Connection via cable entry, M20 x 1.5 or plug connector
- Plug connector connection, either HC26, M23 (RC18) or M12, 12-pin
- Operation of guard locking via IMP as control input on PLC (only 3 mA)
- Monitoring outputs
- OD = ON when door is closed.
- OT = Bolt tongue inserted into the evaluation module (in case of guard locking devices ready for control of the solenoid. In case of interlocking devices corresponds to safety outputs)
- OL = Guard locking solenoid locked in position (in case of guard locking devices: corresponds to safety outputs)
- OI = Diagnostics, there is a fault

Interlocking or guard locking? Functions of the versions MGB-L0, MGB-L1 and MGB-L2 compared

- Guard closed (but can be opened at any time). Bolt tongue inserted into locking module.
- The interlocking module detects the position of the guard and the position of the bolt tongue.
- The bolt tongue in the handle module is moved into and out of the interlocking module by actuating the door handle.
- Guard closed
- Bolt tongue inserted into the locking module
- Locking arm in locking position (the door cannot be opened)
- Version MGB-L1: The locking arm is held in the locked position by spring force and is unlocked by solenoid force (closed-circuit current principle, mechanically locked).
- Version MGB-L2: The locking arm is held in the locked position by solenoid force and is unlocked by spring force when the solenoid is switched off (open-circuit current principle, electrically locked).
